## Concrete Cover Lids - Coating Application System

Industrial Maintenance Group's structural strength coating SC-3700-F, can provide structural support to your lids preventing or stopping cracks. Our coating is applied in thicknesses to last. With over 3700 PSI tensile strength and 300% elongation, our products provide strength while still allowing movement.

### Application Example:

Cracking Concrete, Lids, Concrete Systems—With our SC-3700-F system, your cracking concrete would be filled and encapsulated using our structural strength system. Our method will stop/prevent future weather attacks and the continued weather induced effects.

### System Highlights:

- > High Tensile Strength—3700 PSI @ 60 Mils
- > Elongation 300% plus
- > High Temperature Ranges (-60 to 250°) Standard Operating Temps.
- > Back to service within minutes
- > Can be applied to new or existing concrete cover lids
- > Non-slip surfaces can be provided for walking or driving environments
